Description:

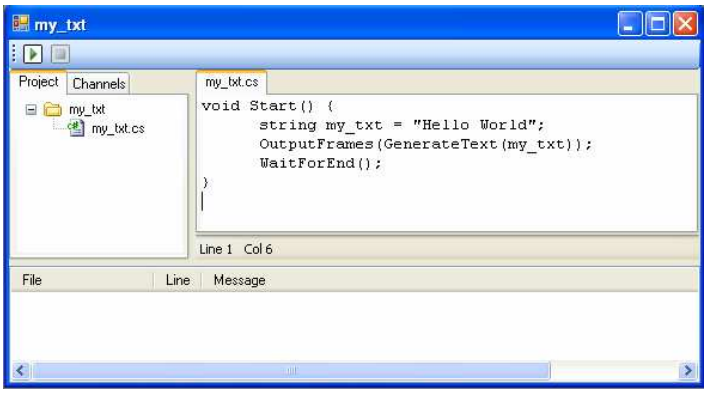

After creating a simple LedTricks Script Sequence that runs without issue from the editor, I schedule it for today 12:00am to 11:30pm repeating every minute. The schedule engine recognizes there is something to execute however the name of it is blank and there is no output on the LedTricks panel. I have tested this with a standard script sequence as well.

Vixen Release v2.0.3.1

Script Code:

```
void Start() {
      string my_txt = "Hello World";
      OutputFrames(GenerateText(my_txt));
      WaitForEnd();
}
```

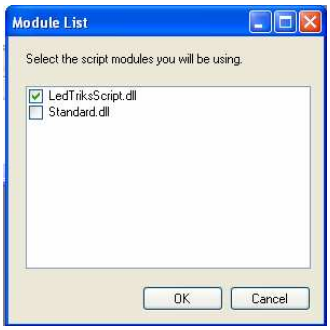

Script Editor Setup:

Screen clipping taken: 10/7/2007, 9:55 AM

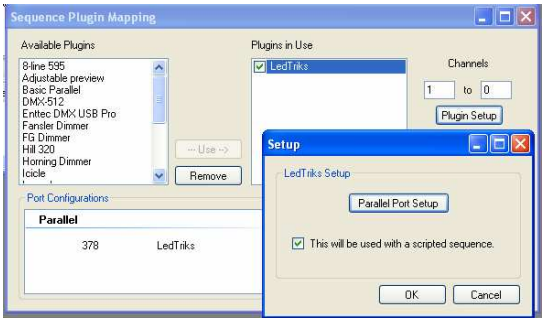

Screen clipping taken: 10/7/2007, 9:56 AM

Screen clipping taken: 10/7/2007, 9:56 AM

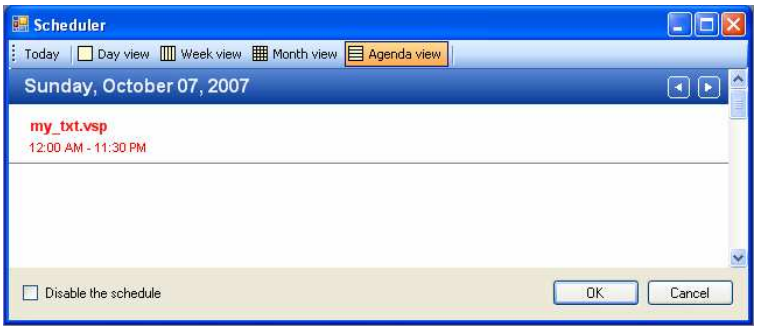

Screen clipping taken: 10/7/2007, 9:57 AM

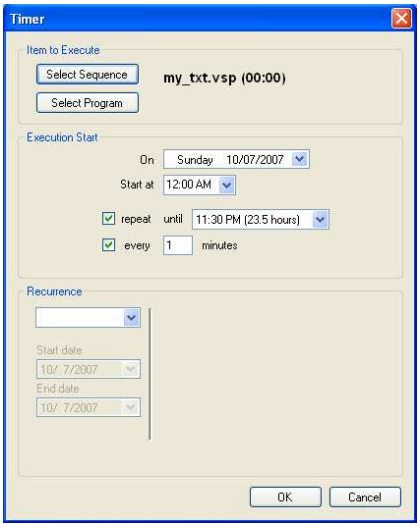

Screen clipping taken: 10/7/2007, 9:57 AM

Scheduler Setup:

Screen clipping taken: 10/7/2007, 10:00 AM

Screen clipping taken: 10/7/2007, 10:00 AM

Schedule Status Window:

Screen clipping taken: 10/7/2007, 10:01 AM

**Notice the blue bar highlighting 'something'. It seems this would be the script sequence. There is no output on the board though it appears something in the schedule is running. I have tried all of the Timer Controls.
